AI Student Request Routing & Support System

Sprint 3 Review

User stories US11–US16 · what changed · live screenshots of the website

Team: Zhanibek Mukatay · Berik Zhumagaliyev · Yessenbay Samatuly · Madi Kanabekov · Alisher Beibituly

SDU University · Sprint 3 deadline 16.10.2026

The product in one minute

Students write in their own words; the system finds the right office and tracks the request

1
Student writes
free text in KZ / RU / EN

2
AI classifies
10 categories + urgency

3
Routed
to the office & least-busy agent

4
Tracked
workflow, SLA timers, chat

5
Measured
analytics, CSAT, reports

Roles

Student · Agent · Unit head · Admin

Roadmap

Sprint 1
Core portal UI
US1–US4

Sprint 2
AI core: classify, priority, routing
US5–US10

Sprint 3
Tracking, SLA, analytics, admin, chat
US11–US16 · today

Sprint 4
Export, retraining, smart suggestions, KB
US17–US22 · next

Sprint 5
Security, E2E tests, release
later

03

Sprint 3

Tracking, SLA, analytics, admin configuration, messaging & CSAT

Deadline 16.10.2026 · US11–US16

Sprint 3 backlog

Iteration 3 · from the S3 Backlog sheet

#	User story	Role	Points	Priority	Owner	Status
US11	**Request Tracking Timeline & Search**	Student / Agent	5	LC & HV	Madi Kanabekov	Done
US12	**SLA Timers & Auto-Escalation**	Unit Head / Agent	6	HC & HV	Berik Zhumagaliyev	Done
US13	**Analytics Dashboard**	Admin / Management	8	HC & HV	Zhanibek Mukatay	Done
US14	**Admin Configuration Panel**	Admin	6	LC & HV	Yessenbay Samatuly	Done
US15	**Messaging & Satisfaction Survey**	Student / Agent	5	LC & HV	Alisher Beibituly	Done
US16	**Sprint 3 Scrum & Release Planning**	Scrum Master	3	LC & HV	Zhanibek Mukatay (SM)	Done

Total: 33 story points · 6 stories · all Done

Priority matrix: LC & HV = low cost, high value (do now); HC & HV = high cost, high value. Sprint 3 turned the AI core from Sprint 2 into a complete service: students can follow their request, staff work against deadlines, and management sees the numbers.

US11 Madi Kanabekov · 5 story points

Request tracking timeline & search

USER STORY

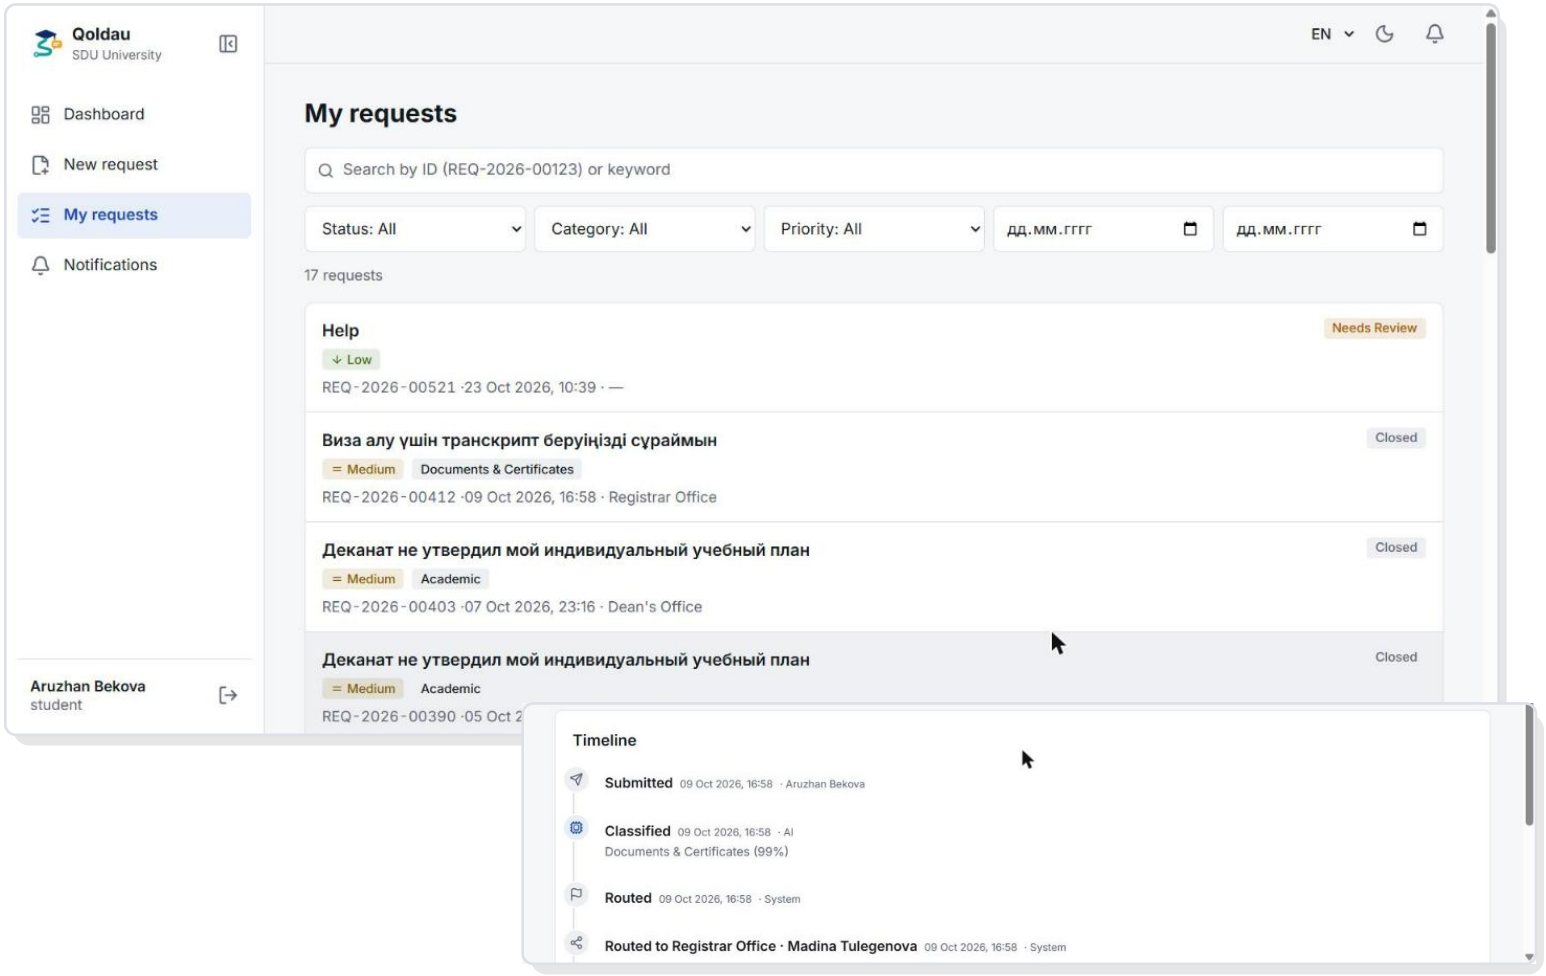

As a student, I want a full timeline of my request and a searchable history of all my requests so I can track progress at any time.

ACCEPTANCE (GIVEN / WHEN / THEN)

- Opening REQ-2026-00123 shows Submitted, Classified (with confidence), Routed, status changes and messages in order with timestamps; internal notes are hidden.
- Typing “dormitory” + Status = In Progress lists only matching requests, 20 per page.

WHAT WE BUILT

- “My requests” list with search by ID or keyword and filters (status, category, priority, dates).
- Vertical timeline built from status history, routing log and messages.
- Students only ever see public events.

US12 Berik Zhumagaliyev · 6 story points

SLA timers & auto-escalation

USER STORY

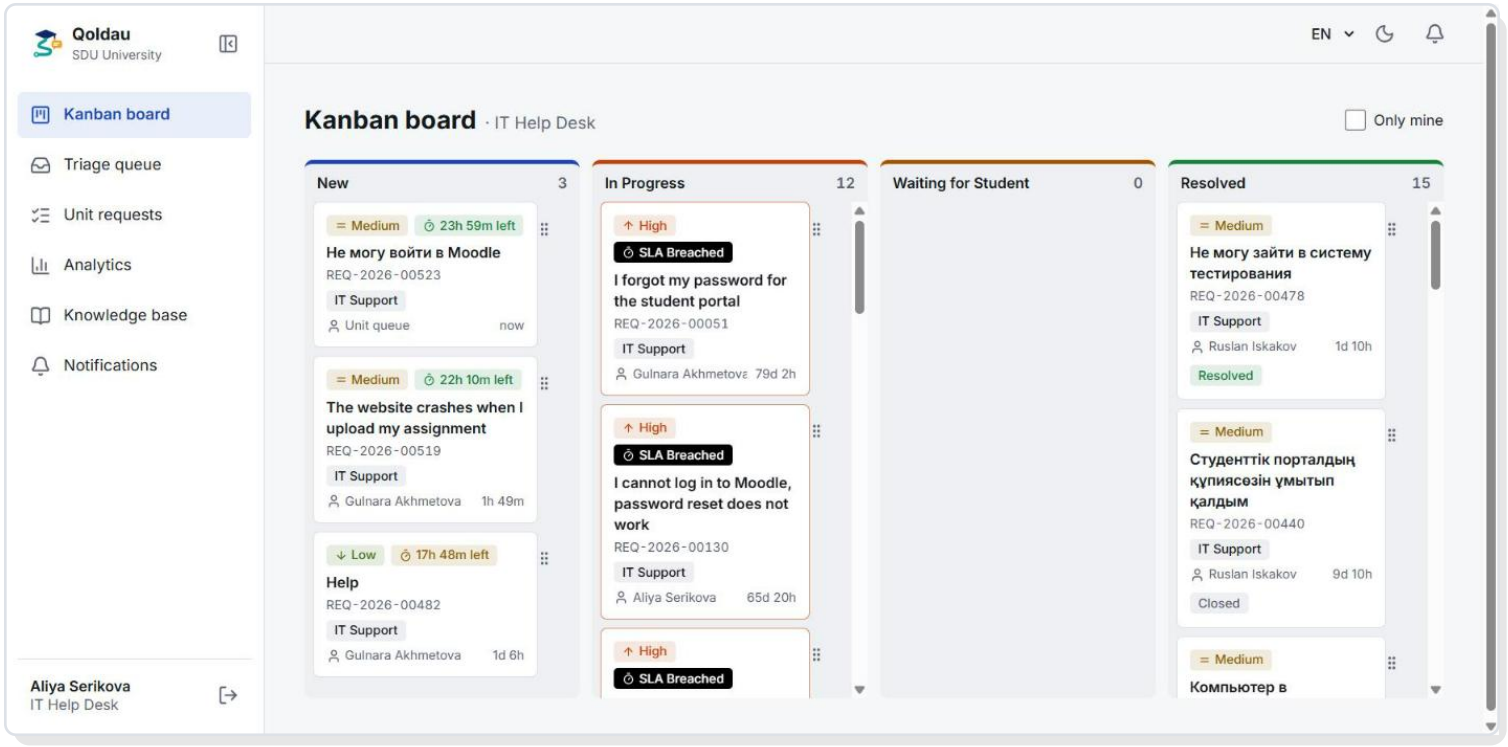

As a unit head, I want SLA deadlines based on urgency and automatic escalation of overdue requests so no student waits too long.

ACCEPTANCE (GIVEN / WHEN / THEN)

- A Critical request in Finance: at 80% of 1 h the agent is warned and the card turns red.
- At breach it is escalated to the unit head, shows “SLA Breached” and is logged.
- While “Waiting for Student” the timer is paused.

WHAT WE BUILT

- Deadlines per priority: Critical 1 h / 8 h, High 4 h / 24 h, Medium 24 h / 3 days, Low 48 h / 5 days.
- Countdown badge on every card: green → yellow → red → black (breached).
- Scheduler checks every minute; breach raises priority one level.

US13 Zhanibek Mukatay · 8 story points

Analytics dashboard

USER STORY

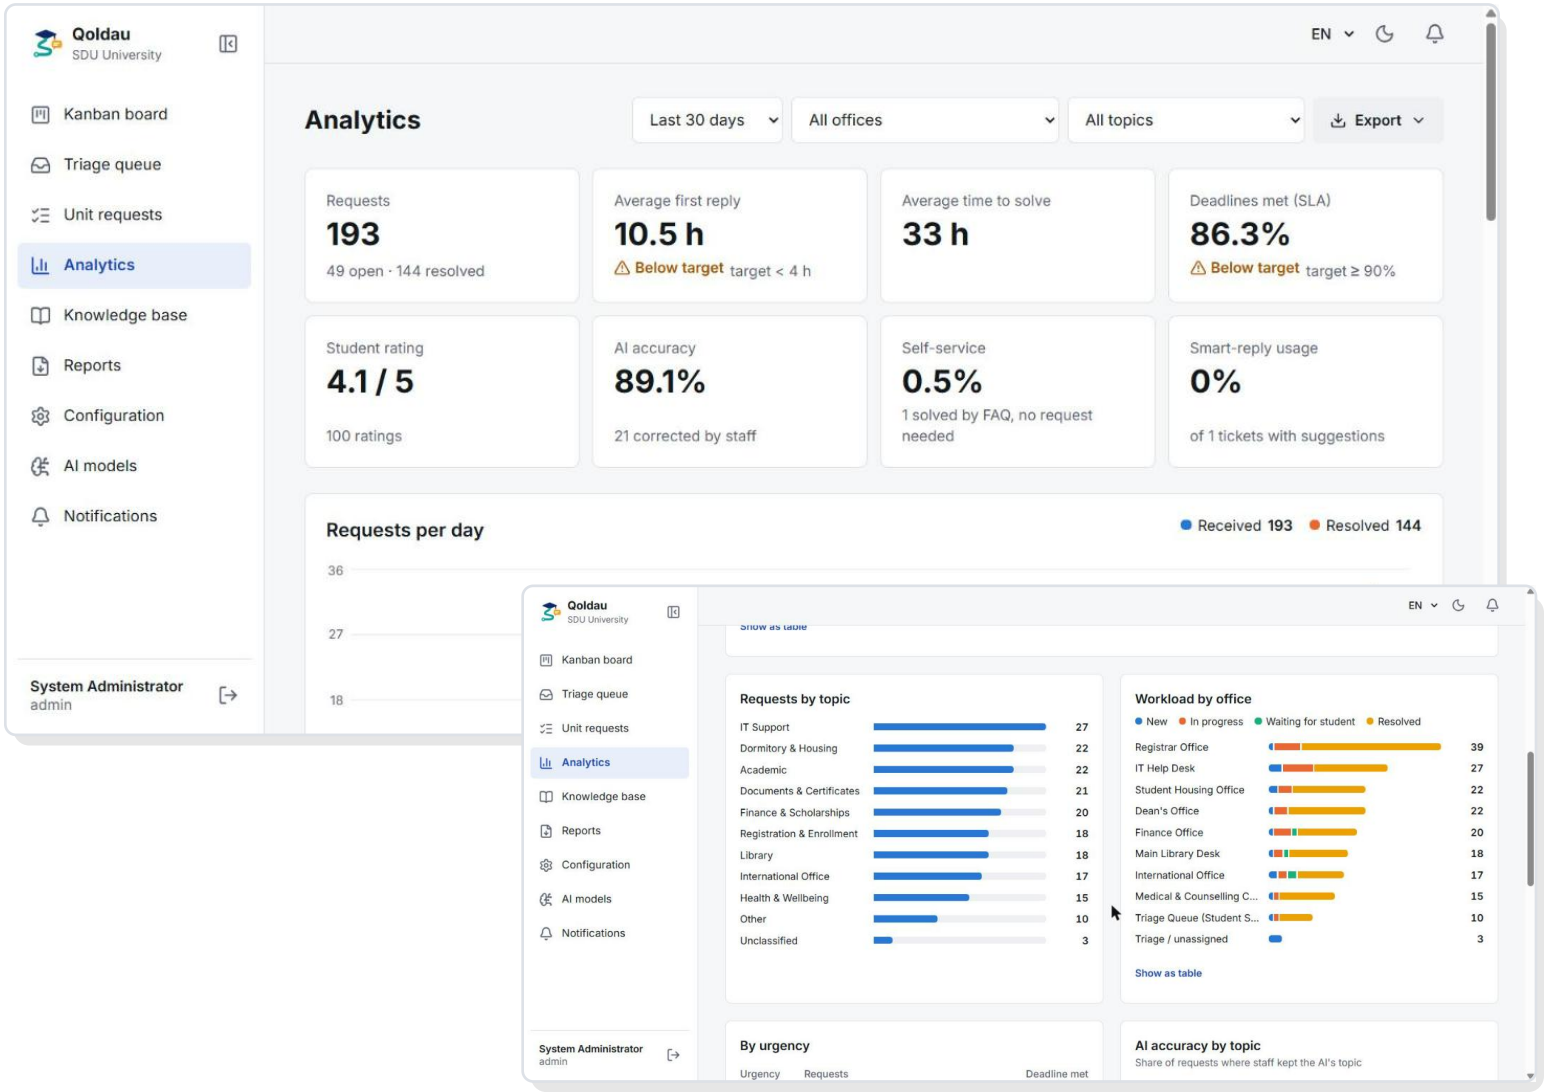

As a university administrator, I want an analytics dashboard with volumes, categories, workload, response times, SLA compliance and AI accuracy so I can make data-driven decisions.

ACCEPTANCE (GIVEN / WHEN / THEN)

- Admin picks “Last 30 days” + IT Help Desk: all KPI cards and charts refresh within 2 s and match the database.
- A unit head sees only their own unit; the unit filter is locked.

WHAT WE BUILT

- 8 KPI cards with targets (first reply, SLA, CSAT, AI accuracy …).
- Charts: requests per day, by topic, workload by office, urgency vs SLA, AI accuracy by topic, agents.
- Every chart has “Show as table” for accessibility.

US14 Yessenbay Samatuly · 6 story points

Admin configuration panel

USER STORY

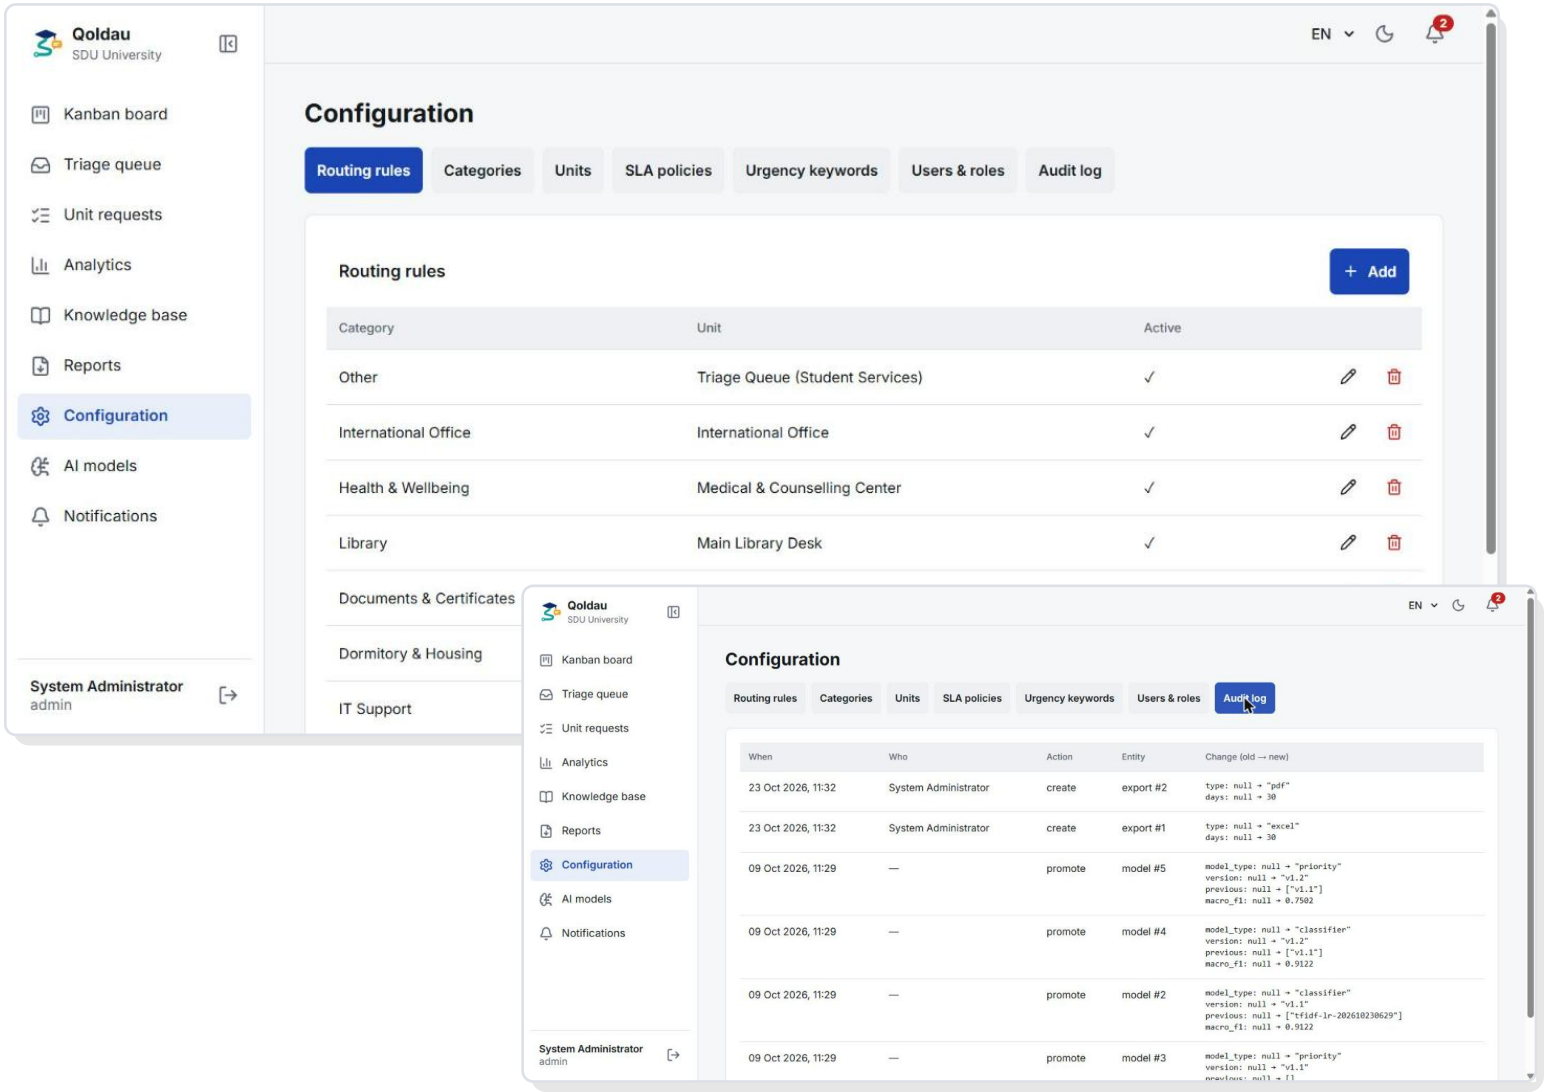

As an administrator, I want to manage categories, units, routing rules, SLA policies, urgency keywords and user roles in a UI so the system can be changed without developers.

ACCEPTANCE (GIVEN / WHEN / THEN)

- Admin adds “Library → Main Library Desk”: the rule appears in the list and the audit log, and the next Library request goes there.
- An Agent opening /admin sees “Access denied”; the API returns 403.

WHAT WE BUILT

- Create / edit / delete for 6 configuration types; changes apply immediately.
- Audit log records who changed what, old → new.
- A unit with open requests cannot be deleted.

US15 Alisher Beibituly · 5 story points

Student–agent messaging & satisfaction survey

USER STORY

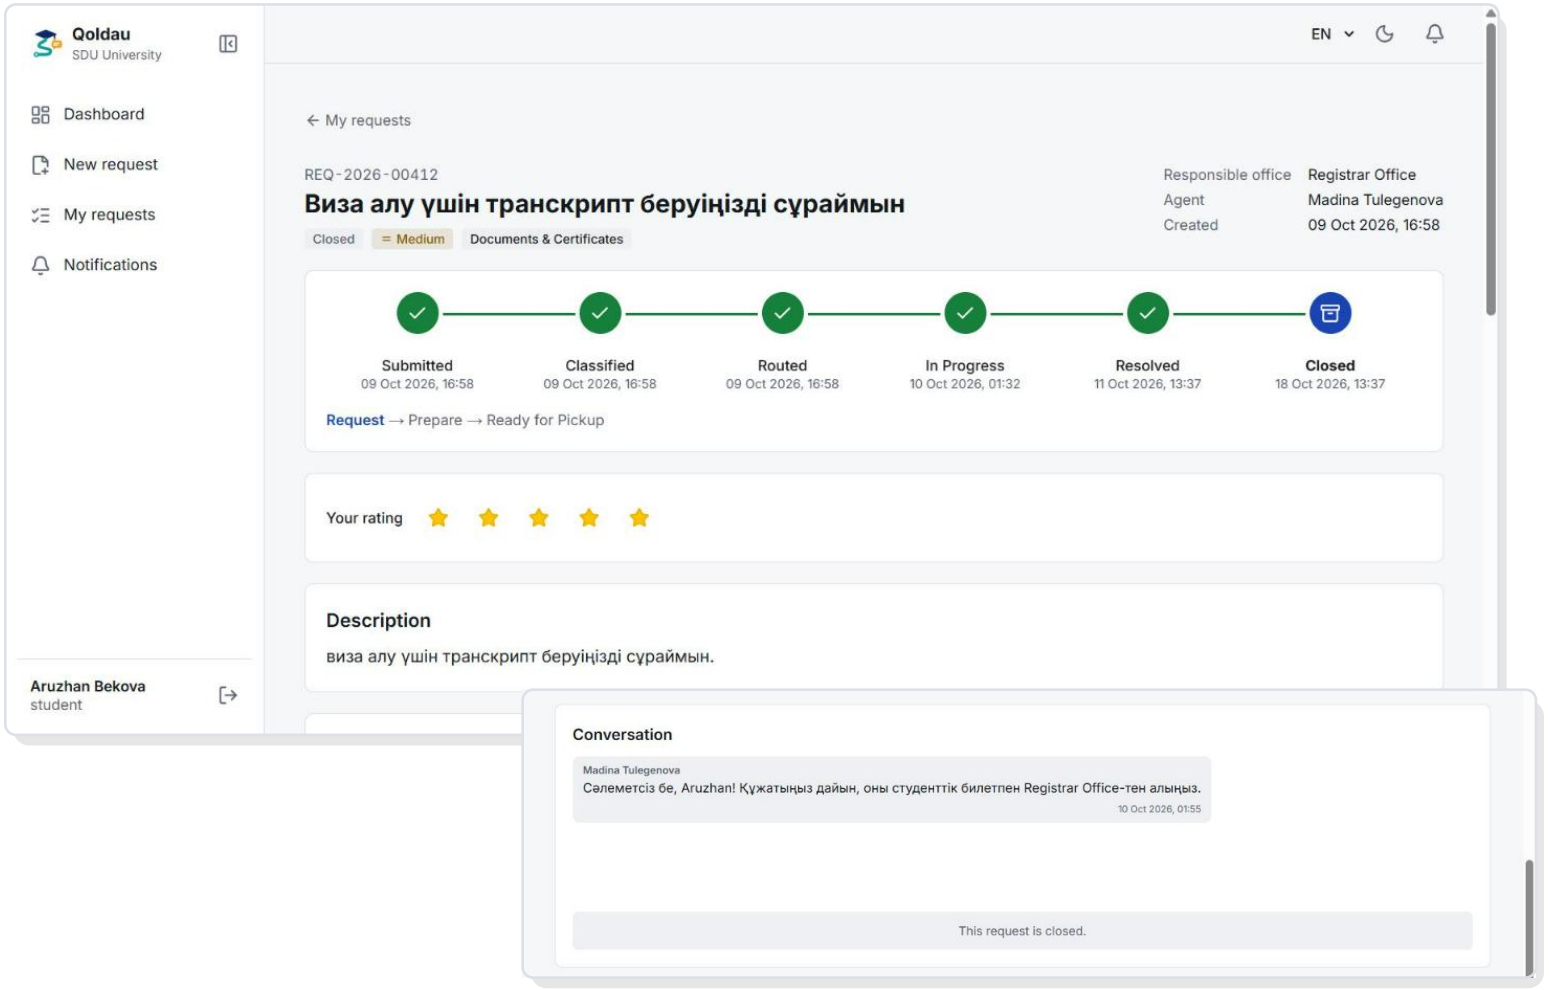

As a student, I want to chat with the assigned agent inside my request, attach files and rate the resolution so communication is fast and quality is measured.

ACCEPTANCE (GIVEN / WHEN / THEN)

- Student sends a 2 MB PDF: the agent sees it instantly, the student sees a read receipt.
- Rating 2 stars “not solved” reopens the request for the unit head; CSAT shows in analytics.

WHAT WE BUILT

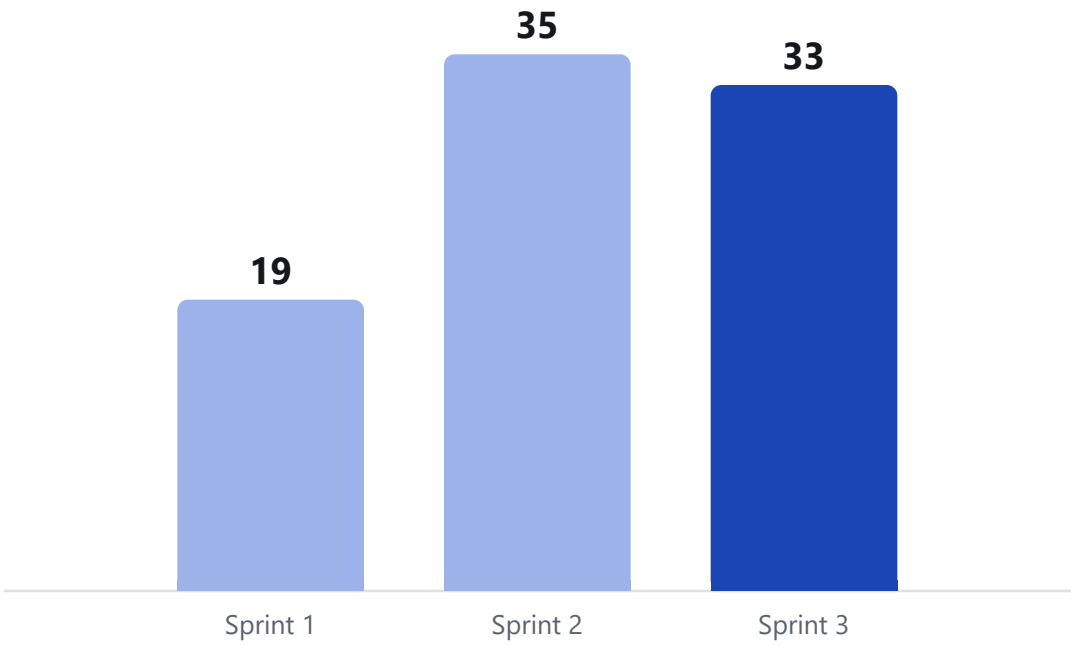

- Real-time chat (WebSocket) with typing indicator and read receipts.
- Attachments PDF / JPG / PNG / DOCX up to 10 MB, checked before saving.
- 1–5 star rating after Resolved; 2 or less reopens the request.

Scrum management & quality

US16 (Sprint 3): ceremonies, velocity, tests

Velocity (story points completed)

Sprint 3 kept a steady pace (33 points) after the larger AI sprint.

How we worked

- Sprint Planning with the HC/LC × HV/LV matrix; daily stand-ups; Review + Retrospective
- Dependencies found during delivery: US12 and US14 share SLA policies and urgency keywords, editable by admins without a redeploy
- Every story checked against its USxQATest Given/When/Then scenarios

Quality in numbers

40 automated tests, all passing (25 → 40 in Sprint 3)

What changed in the system

New parts added in Sprint 3

Website (Next.js)

Request timeline & search	S3
Kanban SLA badges	S3
Analytics dashboard	S3
Configuration panel	S3
Chat + rating	S3

API (FastAPI)

/requests/{id}/timeline	S3
/analytics/*	S3
/admin/*	S3
/messages, /csat	S3

Services & AI

SLA scheduler + escalation	S3
Audit log	S3
WebSocket chat	S3

Demo accounts

Password for every account: Qoldau123!

Student	student@qoldau.edu.kz	New request, My requests, timeline, chat, rating
Agent · IT Help Desk	agent1.it@qoldau.edu.kz	Kanban board with SLA badges, ticket chat
Agent · Triage	agent1.triage@qoldau.edu.kz	Triage queue (low-confidence requests)
Unit head · Registrar	head.registrar@qoldau.edu.kz	Unit analytics
Unit head · Library	head.library@qoldau.edu.kz	Analytics locked to own unit
Admin	admin@qoldau.edu.kz	Configuration, all analytics

Other units follow the same pattern: agent1-3.<unit>@qoldau.edu.kz and head.<unit>@qoldau.edu.kz (deans, registrar, finance, it, housing, library, medical, international, triage).
